EXAMINER	
LEE, SIN J	
ART UNIT	PAPER NUMBER

1752

DATE MAILED: 05/16/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<p style="text-align: center;">Office Action Summary</p>	<p>Application No.</p> <p>10/690,217</p>	<p>Applicant(s)</p> <p>BARCLAY ET AL.</p>	
	<p>Examiner</p> <p>Sin J. Lee</p>	<p>Art Unit</p> <p>1752</p>	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 February 2006.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,5,9,10,12,15-17,20,21,30,37-42 and 60-62 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,5,9,12,15-17,20,21,30,37-42 and 60-62 is/are rejected.
- 7) ☒ Claim(s) 10 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

1. In view of applicants' explanation, previous 112 rejection on claims 1, 5, 9, 10, 12, 15-17, 20-22, 30, 37-42 and 60 is hereby withdrawn.
2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Claim Rejections - 35 USC § 102

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 1, 9, 16, 17, 20, 21, 30, 37-42, and 60-62 are rejected under 35 U.S.C. 102(e) as being anticipated by Barclay et al (US 2003/0219676 A1)

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). **This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not**

Art Unit: 1752

claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Barclay shows a scheme (Scheme II) which depicts a preferred polymerization method for making his siloxane polymer (which is to be used a photoresist resin component) (see [0009] and [0032]). In that scheme, the final product is ladder-like silsesquioxane shown below.

In this structure, the ratio of silanol groups to Si atoms is about 0.7.

Furthermore, Barclay teaches ([0054]) that a preferred polymer for his invention includes one or more repeating unit of formula I, one or more repeating unit of formula II, and one or more repeating unit of formula III, which are shown below

In this polymer, R^1 , which examples are shown in [0055], is neither photoacid-labile group nor aqueous base-solubilizing group. The $-OH$ group in the formula (II) is an aqueous base-solubilizing group. The R^2 group in formula (III) is an acid labile group (see [0055]). Barclay also teaches the use of a photoacid generator together with his polymer to form a positive photoimageable composition (see [0060] and [0015]). Therefore, the prior art teaches present inventions of claims 1, 9, 16, 17, 20, 21, 61 and 62.

Barclay uses his photoimageable composition in a top layer in a bilayer photoresist system (see [0087]-[0090]). In such a system, a bottom layer of a conventional photoresist, such as novolac polymer based resist, is applied to a substrate (such as a silicon wafer – see [0113]). After forming the top layer made of his photoimageable composition, Barclay carries out an exposure step using exposure wavelengths, such as 248, 193, and 157 nm. Following exposure, the top layer film is

developed to form an etch pattern. Therefore, the prior art teaches present inventions of claims 30, 37-42 and 60-62.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 12 and 15 are rejected under 35 U.S.C. 103(a) as being obvious over Barclay et al (US 2003/0219676 A1).

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). **This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is**

Art Unit: 1752

disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C.

103(a). See MPEP § 706.02(I)(1) and § 706.02(I)(2).

As discussed above in Paragraph 7, Barclay teaches that a preferred polymer for his invention includes one or more repeating unit of formula I, one or more repeating unit of formula II, and one or more repeating unit of formula III, which are shown below

Furthermore in [0057], Barclay states the following:

[0057] In general, the monomers of formulae I-III may be polymerized in any ratio to provide the polymers of the present invention. For example, monomers of formulae I and II may be used in any ratio of 1:11 from 99:1 to 1:99. Monomers of formulae I and III may be used in any ratio from of 1:111 from 99:1 to 1:99. When the present polymers are used in positive-acting photoimageable compositions, it is preferred that the monomers of formula III are present from 5 to 80%, based on the total molar percent of the monomers used.

Based on this teaching, it would have been obvious to one skilled in the art to have the repeating unit (III) in the amount of 5% (because "5" is clearly included as the lower end of the taught range), which gives 95% for the sum of (I) and (II). Also, since Barclay

Art Unit: 1752

teaches that the monomer units of formulae I and II can be used in the ratio of 1:99, it would have been obvious to one skilled in the art to have the ratio of the repeating unit (I) to the repeating unit (II) (the sum of repeating units (I) and (II) being 95 mol%) to be 1:99 (which clearly gives at least 50 mol% for the repeating unit (II)) with a reasonable expectation of obtaining a highly resolved relief image. Thus, Barclay's teaching renders obvious present inventions of claims 12 and 15.

7. Claims 1, 5, 9, 12, 15-17, 21, 30, 37-42 and 60-62 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takemura et al (5,731,126).

Takemura teaches a chemically amplified positive resist composition comprising a specific polysiloxane having a terminal silanol group protected with a trimethylsilyl group (an acid labile group) and a photoacid generator (see abstract).

Takemura's polysiloxane (A) is shown below (see col.9, lines 23-35)

, and the reaction scheme for making such polysiloxane is shown below (see col.10, lines 54-67, col.11, lines 1-53)

Art Unit: 1752

Reaction scheme (a):

Takemura teaches (col.10, lines 16-20) that by reacting the polysiloxane (3) shown above (which has the terminal silanol groups) with trimethylsilyl chloride or

hexamethyldisilazane to protect the silanol group at the end of its backbone, there can be eventually obtained a polysiloxane having a minimal number of residual silanol groups. Takemura states that the number of residual silanol groups is significantly reduced by his method (see col.6, lines 33-38). Although Takemura does not expressly teach present ratio of silanol groups to silicon atoms, it is the Examiner's position that the ratio of the residual silanol groups to silicon atoms in Takemura's polysiloxane would inherently *overlap at least with the lower ends* (i.e., 0.05, 0.1, and 0.15 which are very small numbers) of the present ranges because Takemura does not say that the residual silanol groups are completely eliminated but instead states that their polysiloxane *has* a minimal number of residual silanol groups. Therefore, Takemura's teaching would render obvious present ratio of silanol groups to Si atoms (in the case "where the [claimed] ranges overlap or lie inside ranges disclosed by the prior art," a prima facie case of obviousness would exist ***which may be overcome by a showing of unexpected results***, In re Wertheim, 541 F.2d 257, 191 USPQ 90 (CCPA 1976)) and thus would render obvious present inventions of claims 1, 5, 9, 16, 17, 21, 61 and 62.

With respect to present claims 12 and 15, Takemura teaches(col.9, lines 37-38) that $q/(p+q)$ is preferably 0.1 to 0.3 which gives p to be 0.7-0.9 (70-90 mol%). Therefore, Takemura's teaching renders obvious present inventions of claims 12 and 15.

Takemura forms a thick layer of organic polymer (such as a novolak resin) on a silicon substrate as a lower resist film. Takemura coats his inventive resist composition

onto the lower resist film, The coated resist composition film is exposed to a deep UV radiation and then developed to obtain a positive resist pattern on the lower resist film (see col.21, lines 24-40). Thus, Takemura's teaching renders obvious present inventions of claims 30, 37-42 and 60.

Allowable Subject Matter

8. Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. None of the cited prior arts teaches or suggest present aqueous base-solubilizing groups listed in present claim 10.

Response to Arguments

9. Applicants argue that Takemura provides no indication of polymer having a silanol value as recited in applicants' claims and that Takemura expressly seeks to rid the polymers of silanol moieties. However, as addressed above, although Takemura does not expressly teach present ratio of silanol groups to silicon atoms, it is still the Examiner's position that the ratio of the residual silanol groups to silicon atoms in Takemura's polysiloxane would inherently *overlap at least with the lower ends* (i.e., 0.05, 0.1, and 0.15 which are very small numbers) of the present ranges because Takemura does not say that the residual silanol groups are completely eliminated but instead states that their polysiloxane *has* a minimal number of residual silanol groups. Therefore, Takemura's teaching would render obvious present ratio of silanol groups to Si atoms (see In re Wertheim, supra). Therefore, present rejection over Takemura still stands.

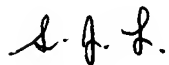

Art Unit: 1752

Present 102(e) and 103(a) rejections over Barclay et al'676 still stand because applicant have not submitted any showing (as addressed in Paragraphs 4 and 6) to overcome those rejections.

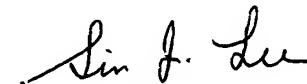

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sin J. Lee whose telephone number is 571-272-1333. The examiner can normally be reached on Monday-Friday from 9:00 am EST to 5:30 pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cynthia Kelly, can be reached on 571-272-1526. The fax phone number for the organization where this application or proceeding is assigned is **571-273-8300**.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
